

Heuristic Evaluation

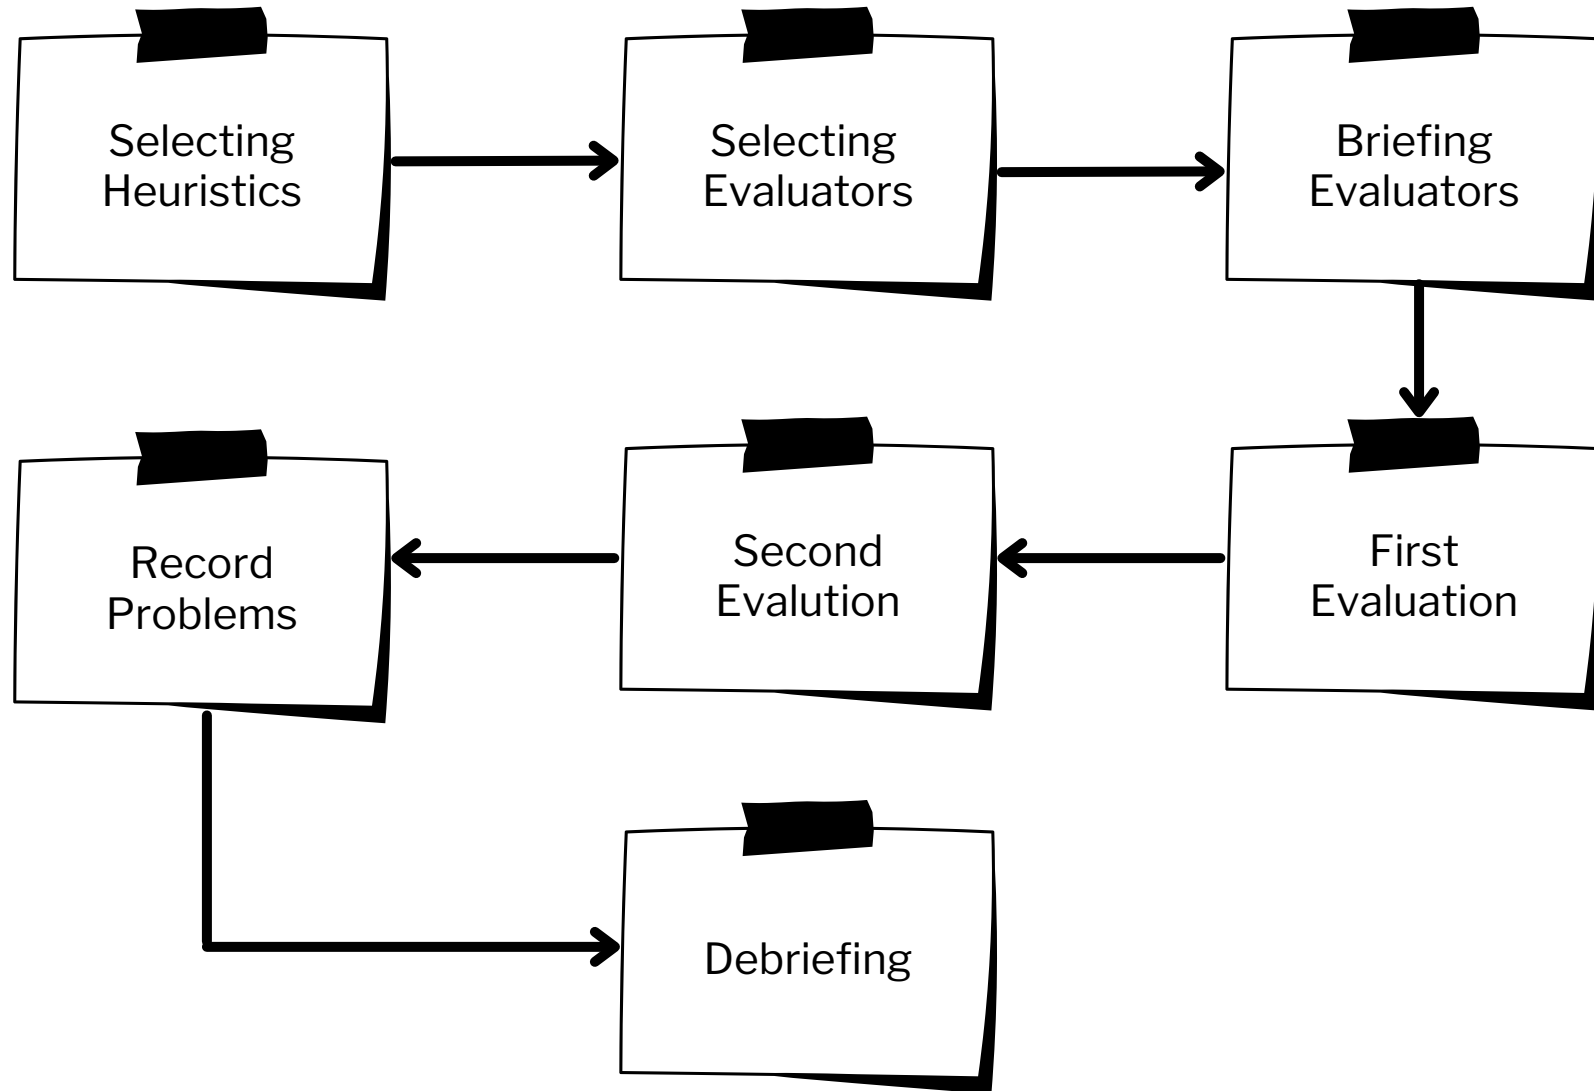

WHAT IS HEURISTIC EVALUATION?

It is a method for finding the usability problems in a user interface design such as dialog box, Navigation bar etc, and see if they follow some guidelines (Heuristics).

Shneiderman's 8 Golden Rules

1. Consistency (L)
2. Shortcuts (EF)
3. Feedback (V)
4. Dialog closure (V)
5. Simple error handling (ER)
6. Reversible actions (UC)
7. Put user in control (UC)
8. Reduce short-term memory load (ER)

6.831 User Interface Design and Implementation

Source

Selecting Evaluators

Selected evaluators should have some knowledge about the what they are evaluating

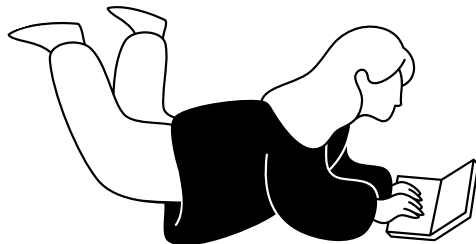

Briefing Evaluators

- Giving them instructions, what they have to cover
- Assigning them task

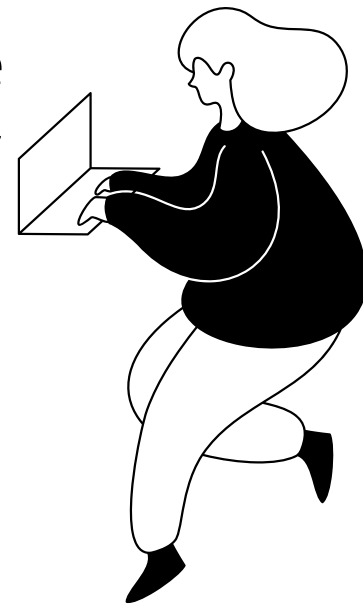

First Evaluation

Give them free time to get familiarized with the product, so that they can understand how to use the product and identify the elements they are evaluating

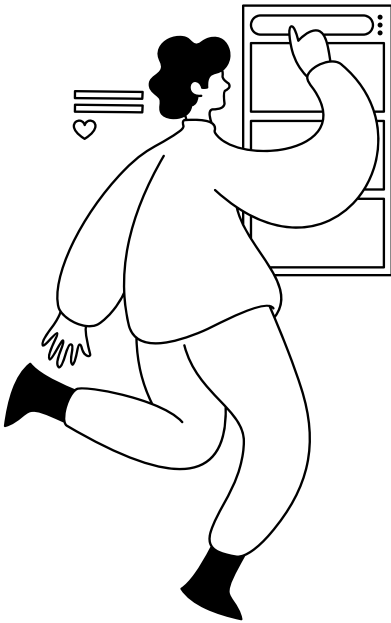

Second Evaluation

In second phase, evaluators will do another run through and apply your chosen heuristic to the identified elements and decide whether they fit your heuristics.

Record Problems

- You can ask evaluators to write down the problems
- You may record the evaluators
- Think Aloud Method

Recording Evaluators

c o n s e n t
matters

Source

- Ask for permission to record him/her
- Make them sign consent form

Think Aloud

In a thinking aloud test, you ask test participants to use the system while continuously thinking out loud — that is, simply verbalizing their thoughts as they move through the user interface.

Example

Debriefing

Allowing Evaluator to interact with each other and collaborate their findings, and encouraging them to suggest some potential solutions for the findings

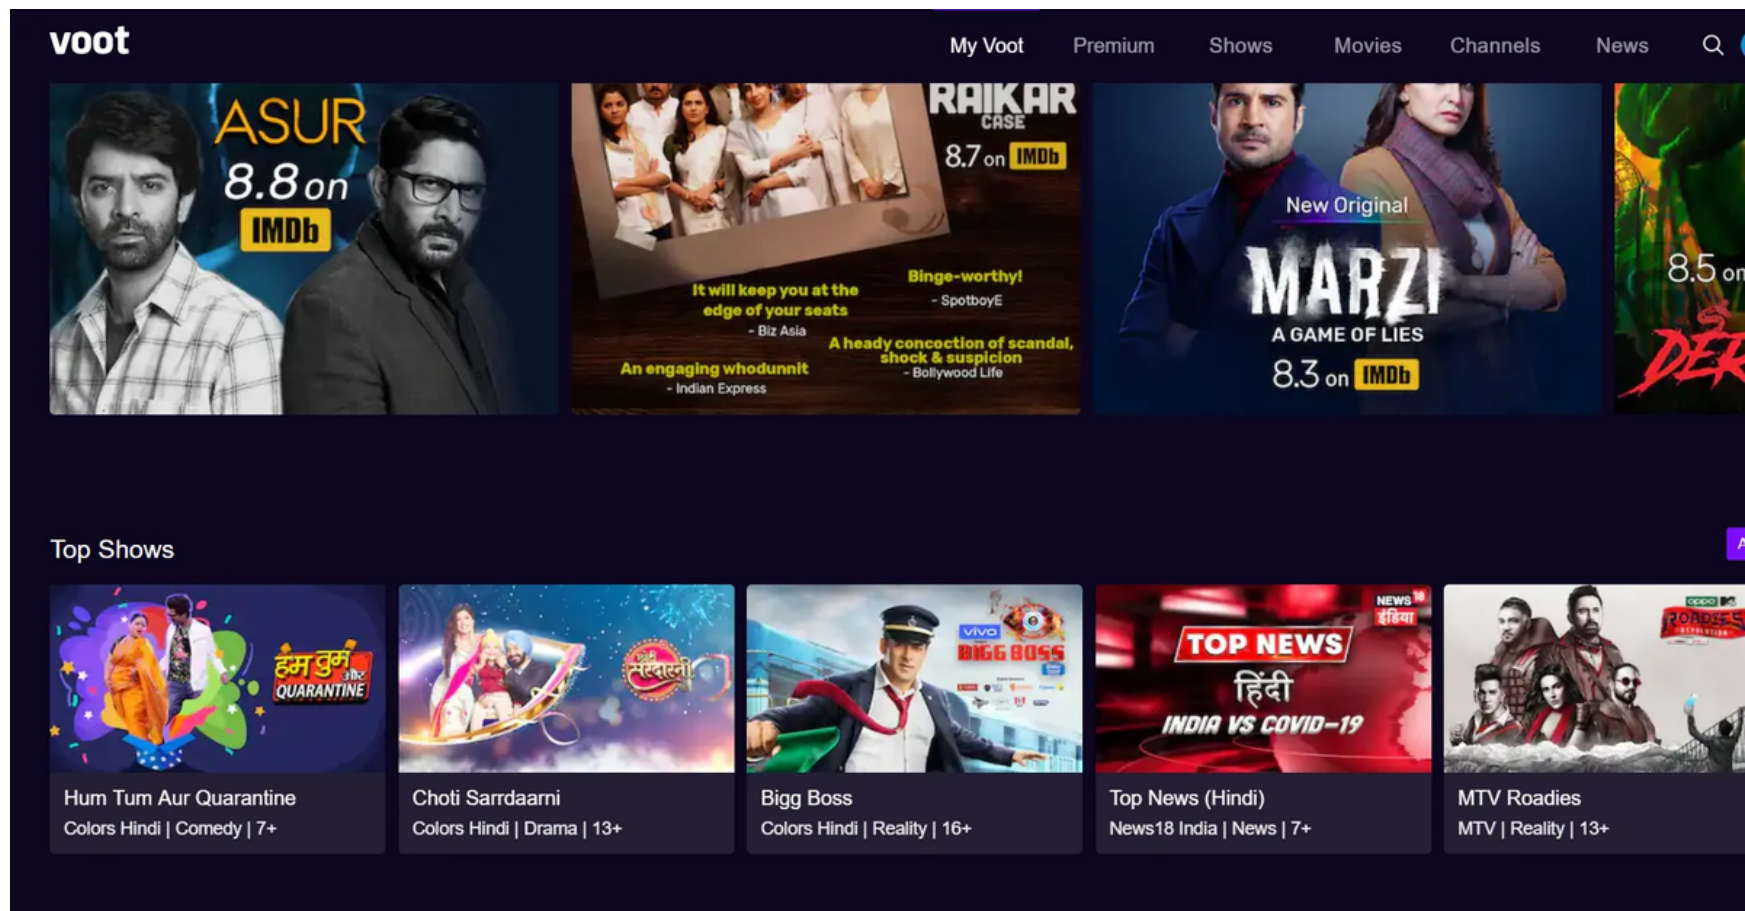

HEURISTIC EVALUATION OF

voot

A Viacom 18 Product

1. Validity of system status

- Are users kept informed about what is going on?
- Is appropriate visible status displayed on the within a reasonable time?

[Source](#)

Issues

The 'premium' content is not marked anywhere on the home page.

Only visible once the user clicks on that particular show/movie.

Recommendation

An overlay of small icon indicating the premium content so users know about the premium content without click every show/movie.

2. Match between system and real world

- Is the language and interface simple?
- Are the words, phrases and concepts familiar to the user?

Issues

No support for regional languages.

Recommendation

There should be an option to change the user interface language, at least some major languages like Hindi, Marathi etc.

Severity

3. User control and freedom

- Are there ways of allowing users to easily leave 'places' they unexpectedly find themselves in?

Comment

The navigation bar is always there, so if a user gets lost somehow use the navigation menu bar to go to desired location.

Recommendation

N.A.

Severity

4. Consistency and standards

- Are the ways of performing similar actions uniform?

Comment

The website uses a uniform user interface through the platform. The animations & buttons are uniform throughout.

Recommendation

N.A.

Severity

5. Error Prevention

- Where and why do errors occur?

Issues

"Google Play" link is not working.

'Contact Us' and 'FAQ' buttons open the same page of the FAQ.

Recommendation

Update the link to google play store. The Contact Us button should open the related page not the FAQ page.

Severity

6. Recognition rather than recall

- Are objects, actions and options always visible?

Issues

While watching a show/movie, the entire player is not visible until you full screen the video player.

Recommendation

Reduce the dimensions of the video player so that the entire video is visible.

Severity

7. Flexibility and efficiency of use

- Have accelerators (i.e. shortcuts) been provided that allow more experience users to carry out tasks more quickly?

Issues

No description of the show is provided in the gallery view.

Recommendation

Display a short description of the show on hover.

Severity

8. Aesthetic and minimalist design

- Is any unnecessary and irrelevant information provided?

Comment

The website doesn't show any unnecessary and irrelevant information that deviates or irritates the user.

Recommendation

N.A.

Severity

9. Help users recognize, diagnose, and recover from errors

- Are user messages helpful?
- Do they use plain language to describe the nature of the problem and suggest a way of solving it?

Issues

No diagnostic feature. Only feedback - "Something went wrong".

Recommendation

A more appropriate message to specify the error, along with details to contact customer care.

Severity

10. Help and documentation

- Is help information provided that can be easily searched and easily followed?

Comment

The documentation is easily navigable and located at its orthodox position.

Recommendation

N.A.

Severity
