

# Persona & Scenarios

personas

Personas are fictional characters, which you create based upon your research in order to represent the different user types that might use your service, product, site, or brand in a similar way. Creating personas helps the designer to understand users' needs, experiences, behaviors and goals.

# Empathy is key.

You need to understand how your users feel – their wants, need and desires. Only by understanding your users can you create effective experiences that users actually want to use.

Create a hypothesis about the type of users of your product – think about their demographics and needs. Use these hypotheses to generate your personas.

# How do we use Personas?

- **1 Define with empathy**

Create a fictitious user that might use your product. Find their needs, wants and desires.

- **2 Scenario**

Narrate how your persona interacts with your product in a sequence of events.

- **3 Goals**

Use the scenarios to make your personas achieve their goals in your product

# Okay, so how do personas look?

### Jill Anderson

"I'm looking for a site that will simplify the planning of my business trips."

AGE 29  
OCCUPATION Regional Director  
STATUS Single  
LOCATION Portsmouth, NH  
TIER Frequent Traveler  
ARCHETYPE The Planner

Organized Practical  
Protective Hardworking

#### Bio

Jill is a Regional Director who travels 4-8 times each month for work. She has a specific region in which she travels, and she often visits the same cities and stays in the same hotel. She is frustrated by the fact that no matter how frequently she takes similar trips, she spends hours of her day booking travel. She expects her travel solutions to be as organized as she is.

#### Personality

|           |            |
|-----------|------------|
| Extrovert | Introvert  |
| Sensing   | Intuition  |
| Thinking  | Feeling    |
| Judging   | Perceiving |

#### Goals

- To spend less time booking travel
- To maximize her loyalty points and rewards
- To narrow her options when it comes to shop

#### Frustrations

- Too much time spent booking - she's busy!
- Too many websites visited per trip
- Not terribly tech savvy - doesn't like the process

#### Motivations

|                   |  |

01

NAME

### Leena Heikkinen

TYPE

### Rational

#### Background

- Working as a UX Researcher in a design consultancy in Finland.
- Engaged in multiple products spanning different industries
- Currently working on a project which involves developing an electronic health record (EHR) capable of sharing individual healthcare data of Finnish individuals with different healthcare providers

#### Goals

- Wants to measure how much would people trust an EHR and report results to stakeholders
- Find an online, easy to use tool that can not only measure trust in technology but also report results in a nice visual way
- Wants to understand how to proceed forward if trust levels of people with EHR are low

#### Motivations

Interested in learning new tools and techniques which can help her develop professionally

#### Frustrations

- Does not have deep knowledge about trust and its importance in technology.
- Is action focused - so wants to understand why measuring trust is important, and how can that inform product design decisions

#### Demographics

- 33 years old
- UX Researcher in a Design consultancy

02

Peter

Works as product manager for a mid-sized company.

Is 35 years old, holds a marketing degree.

Has got experience working as a product owner on software products with agile teams.

Had some Scrum training.

Has managed mature products successfully. Now faces the challenge of creating a brand-new product.

Wants to leverage his agile knowledge but needs advice on creating innovative product using agile techniques.

**Monika**, born 1952 (65 years old)  
In transition to retirement, musicologist

**Personal background**

- Worked in a church and lectured at a university
- Lives alone in a large rented apartment in a big city
- Her husband died a few years ago and they had no children
- Has contact with her family and the children of her sister

**Health situation**

- Has no major health issues
- Slightly overweight and sometimes suffers from back pain
- Has a healthy lifestyle with gymnastics and long walks

**Health-related information**

- Has quite a strong interest in health issues
- No problems searching for information
- Critical toward the public media, since uncertain what is trustworthy
- Trusts especially her family and friends
- Uncertain about information on different treatment methods

**Attitude to technical devices**

- Has great interest in technical devices, but finds it difficult to handle them
- Feels most secure when using a laptop
- Watches videos online, does online banking, uses e-mail services
- Possesses an e-book reader she barely uses
- Inherited a smartphone and tablet computer from her late husband
- Finds health-related apps horrible because she is afraid of misdiagnosis

# The Template

Can be used in assignments.

We encourage you to explore personas create your own templates with all the information.

scenarios

**User scenarios are stories which designers create to show how users might act to achieve a goal in a system or environment.**

A SCENARIO CONSISTS OF

01 **Story – A narrative**

02 **User Flow**

03 **Scenario Mapping**

# Story – A narrative

Creating a story about a character in a specific context who faces a certain problem and how they use your solution.

In a story, you include

1. The actors / characters involved (personas)
2. Their characteristics/goals. What is that motivates them to use your solution?
3. How do they use your solution? What process do they follow?

# Story – Let's take a look

## Story

### A narrative

The story is of a boy called Advik who is a fresher at IIITD, and is very excited to finally be a bit more independent.

One day, while at the library, he observed some students working at the library. They are his batchmates, but Advik wonders why are they were there. The librarian Ms. Kapoor was also standing nearby. Curious Advik asks the batchmate, Rahul about why is he working at the library as if it's his job. Rahul tells him that this is volunteer work to earn some IIIT bucks. Advik is confused yet excited after hearing this. Ms. Kapoor tells him about the college app which allows him to select some volunteer work that is to be done in the college, in order to earn a digital currency that can be used in the campus.

Advik finally sets up the app and one day, after getting free from his classes early Advik surfs through the app to look for some work. Since he was familiar, he chooses the library job. Advik helped in issuing the books to the students at the counter for about an hour. After finishing his work at the library he receives a notification on his phone, saying that he has received 50 bucks from the librarian. He uses the bucks earned to buy himself food in the canteen.

Advik now feels one step closer to being financially independent, and feels satisfied and motivated to volunteer and earn more.

## Scenario - Story

### Scenario 1

Priya is a third year CSD undergraduate at IIIT Delhi. She has always been a hardworking person, striving to excel in both academic and extra-curricular domains. She is extroverted and competitive. The need to excel leads to her being overly stressed, which is worsened by the heavy academic load at IIIT Delhi.

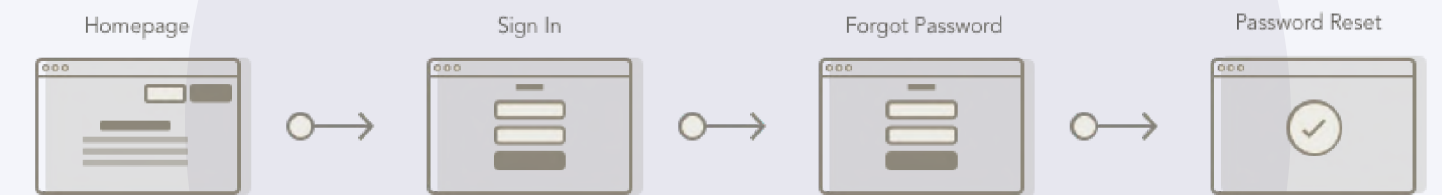

Not only is she required to study for five courses, but she is also interning at Koogole, a software engineering firm. Spending time with family and friends has become next to impossible for her, and she finds little to no time to relax and pursue her hobbies. Before joining college, she would play the guitar, but that hobby is slowly falling out of touch.

She came across Aztec - a smart study planner application which made her life easier and less stressful. The app schedules her study time-table for her, so as to minimize the amount of time she needs to spend to achieve her academic goals. Not only that, the app helps her schedule her group meetings, based on the timetables of her group mates, thereby saving time for everyone in her group. The app knows her studying speed, and also knows how difficult any given subject is, and therefore can predict how much time Priya needs to invest in a given course. If she fails to meet a deadline set by the app, the app cleverly recalculates the best timeline for her to follow, and takes a note of the incident to offer better predictions in the future. Finally, the app also motivates her when she's missing deadlines, and also encourages her to start early, by showing how much extra she can score by doing so.

Priya is now better organized than ever, and is making the best use of her time, without having to compromise on her goals and ambitions. This has also improved her mental health, as she can interact more with her friends and family, and also play the guitar regularly!

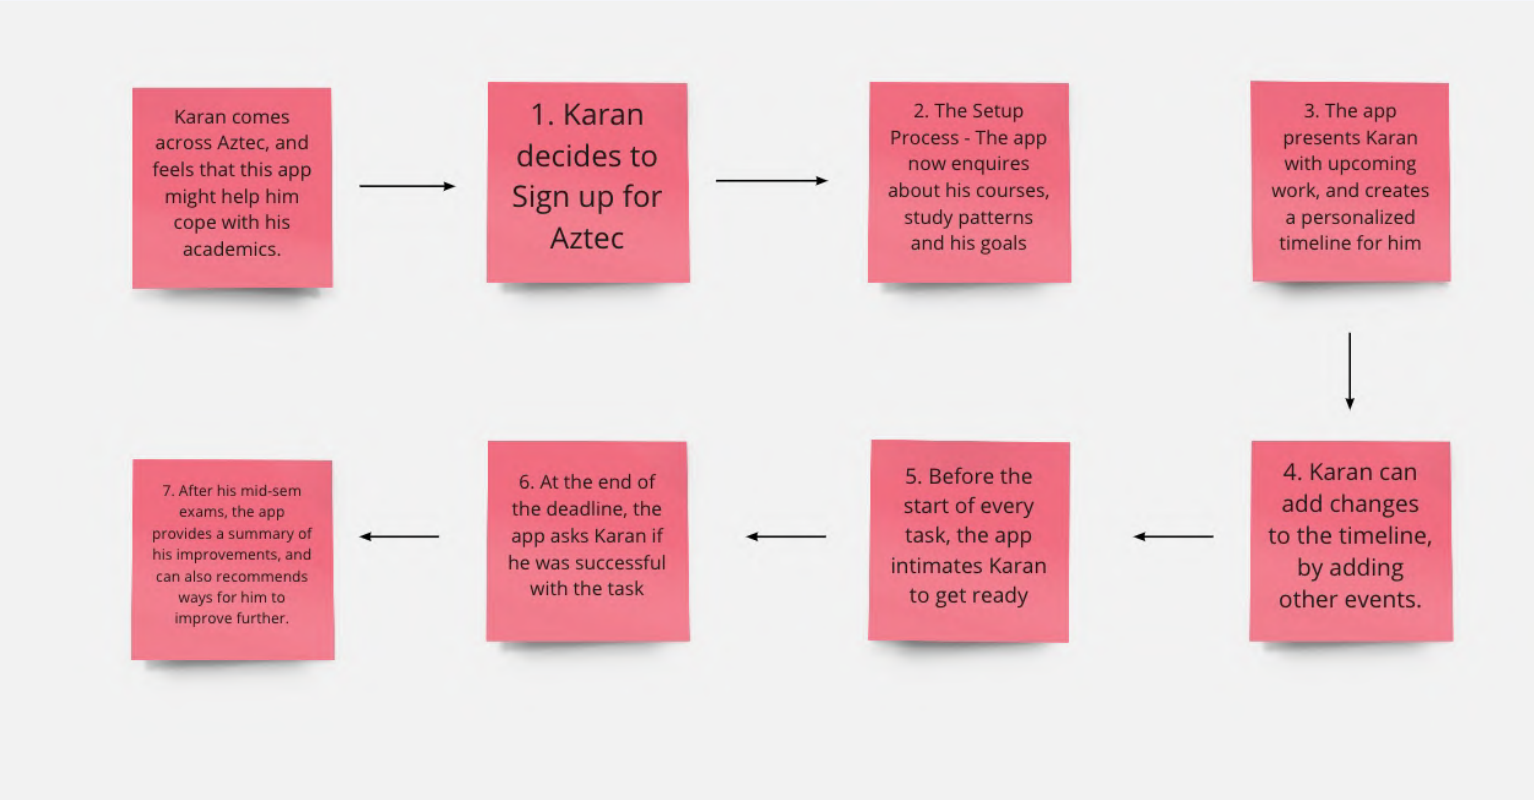

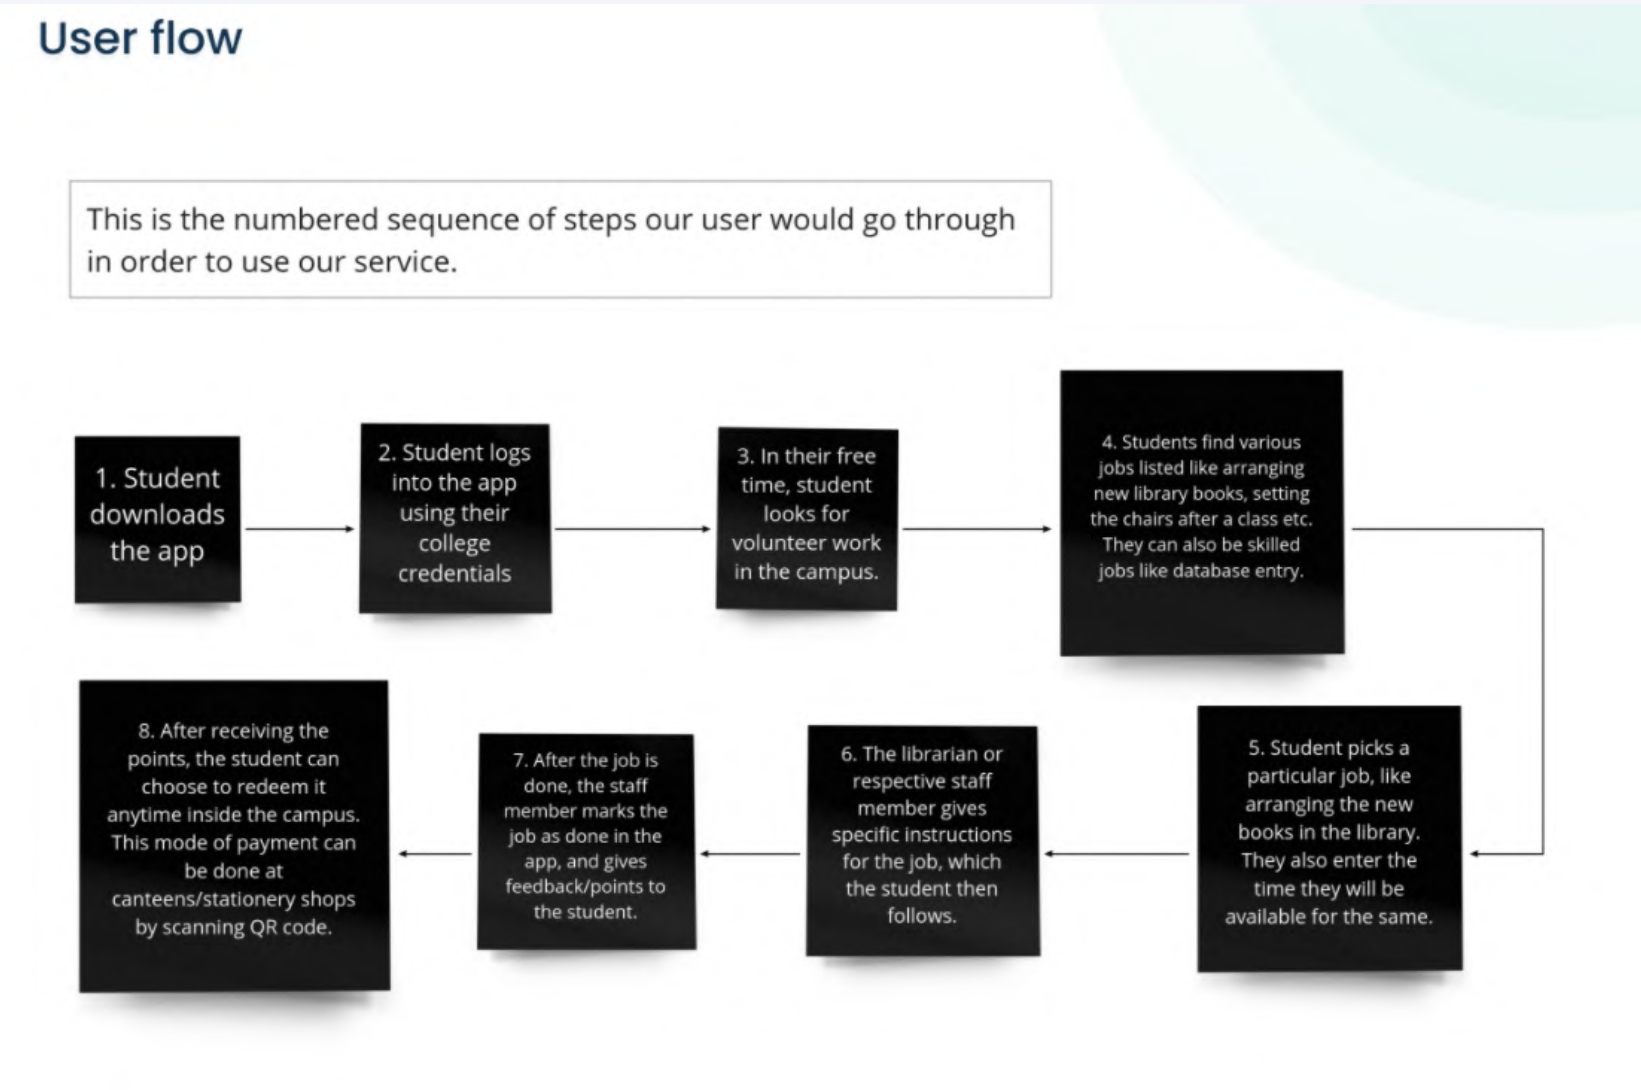

# User Flow

This is a step by step detailed flow of how a user uses your application/product. It should be more focused on how your persona/character in the narrative will follow a sequence of steps to achieve their goals through your solution/product.

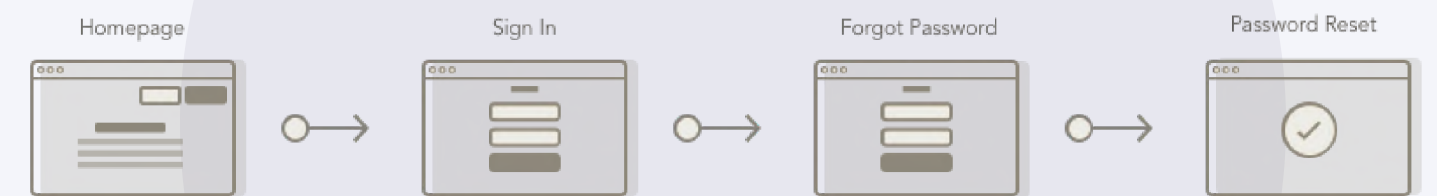

# User Flow - Let's take a look

# Scenario Mapping

This is a detailed mapping of all the steps a user follow while using your product/solution indicated left to right. Vertically under each step, are the details of each step like comments, suggestions, ideas, questions etc.

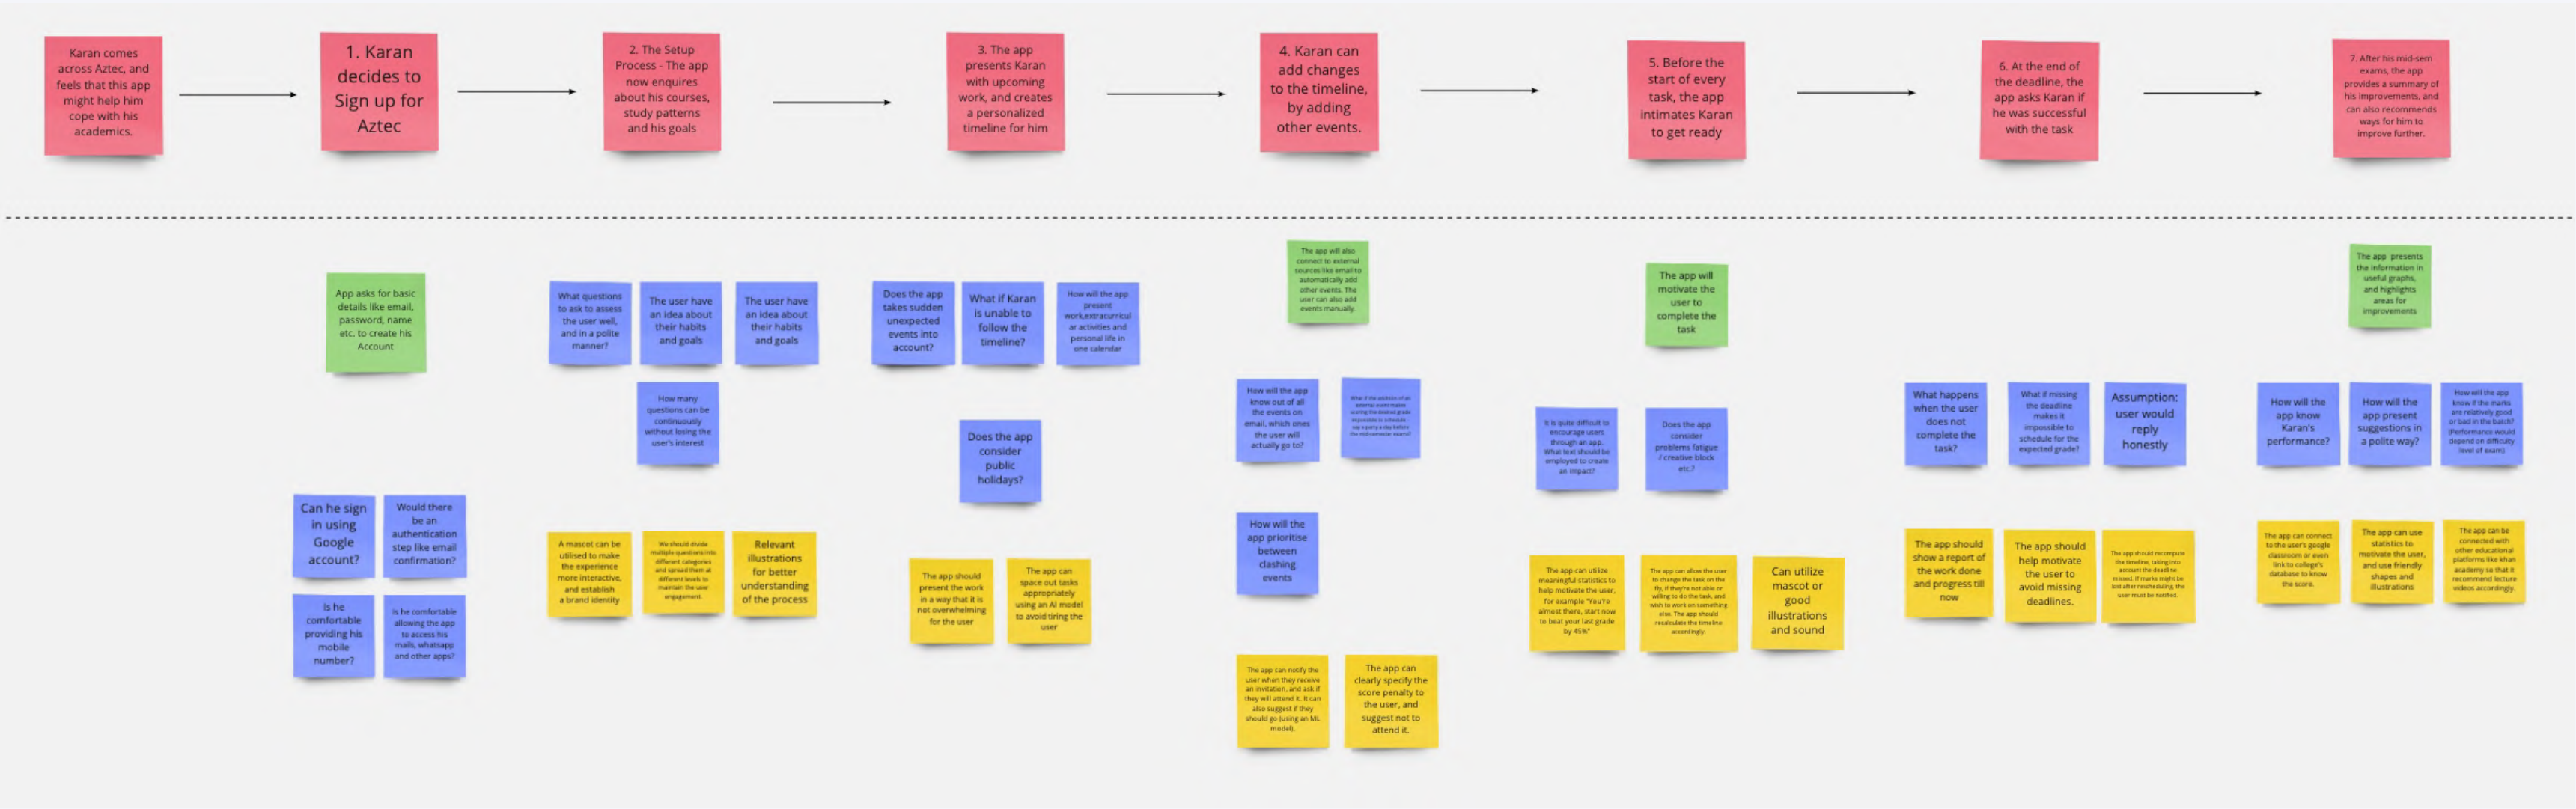

# Scenario Mapping - Let's take a look

This is the scenario mapping of how a user would use the app. We also added what the user would be doing, thinking, feeling while doing the respective steps. In addition to this, we added questions at each step that can help us understand the scenario better and even think for possible features in the app.

|           |                                                                                                                                                                      |                                                                                                                                                                                            |                                                                                                                                                                               |                                                                                                     |                                                                                                                                                                                                 |                                                                                                                     |
