

MPTCP

It has no limits on how many subflows you can attach, depends on the # of NIC you have on the device.

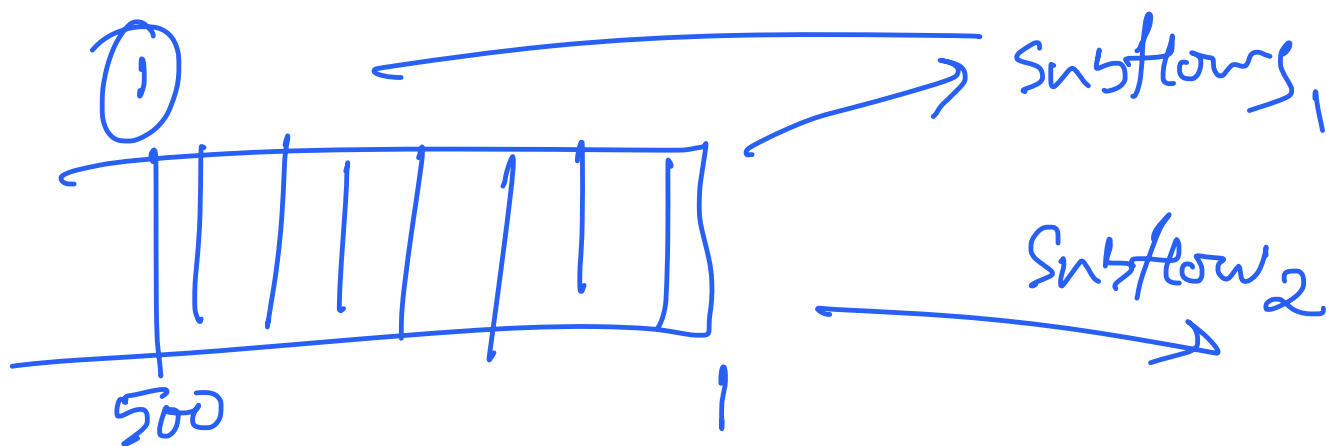

In data centers network, MPTCP is very famous & used for improvement in thput.

X = f(TCP type and obtained security)

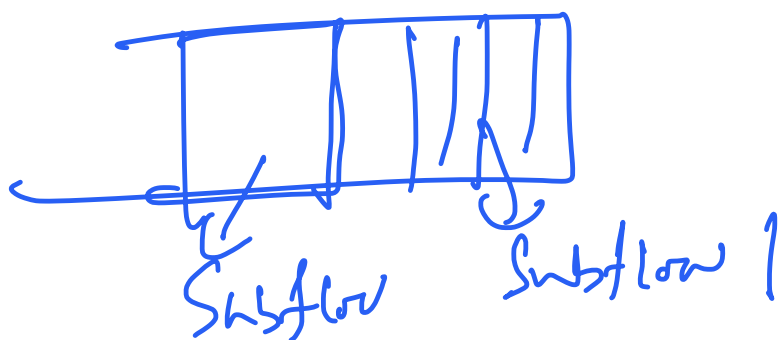

$\frac{TCP\ Seq\ 1}{MP-Seq\ 1}$

TCP Conn

② Two network paths will have diff latency characteristics. ✓

— Create separate subflow seq.

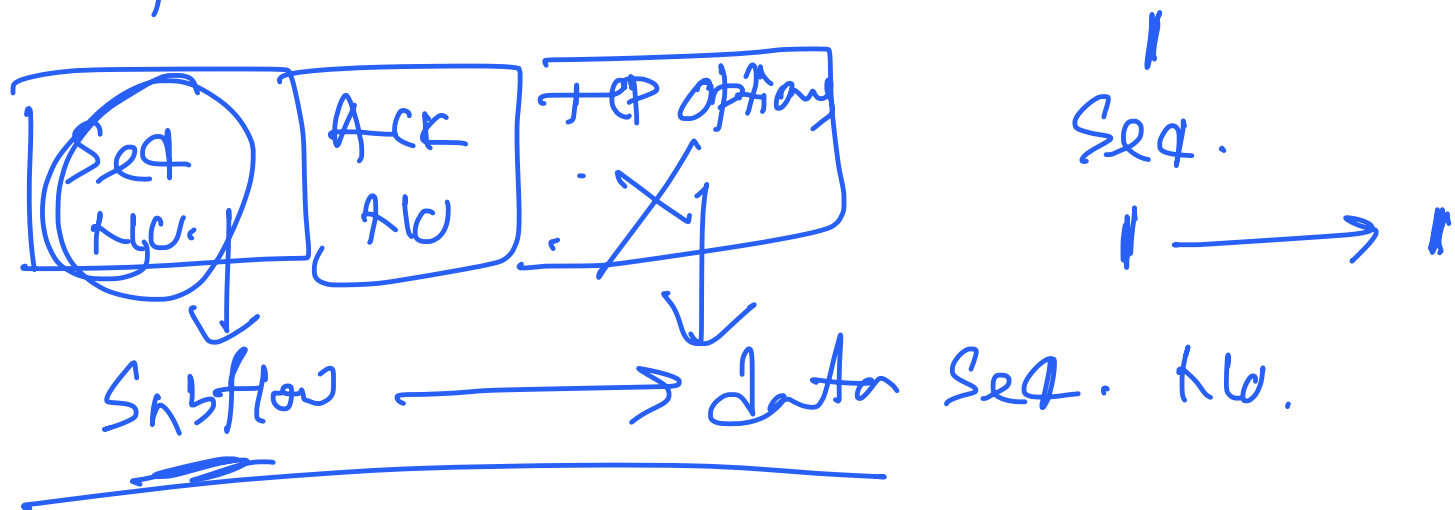

Two diff sequence numbers

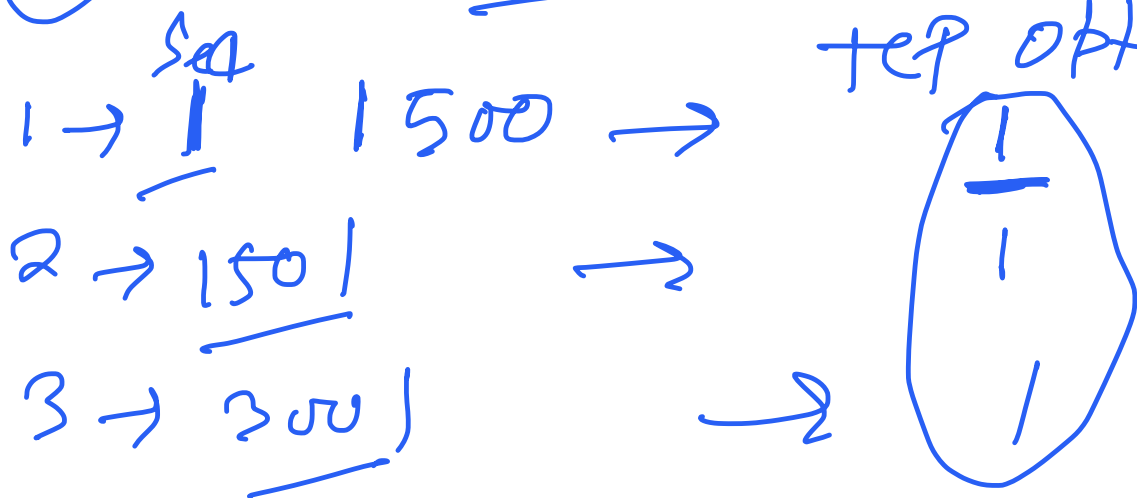

① Data TCP Seq numbers

② Subflow Seq numbers

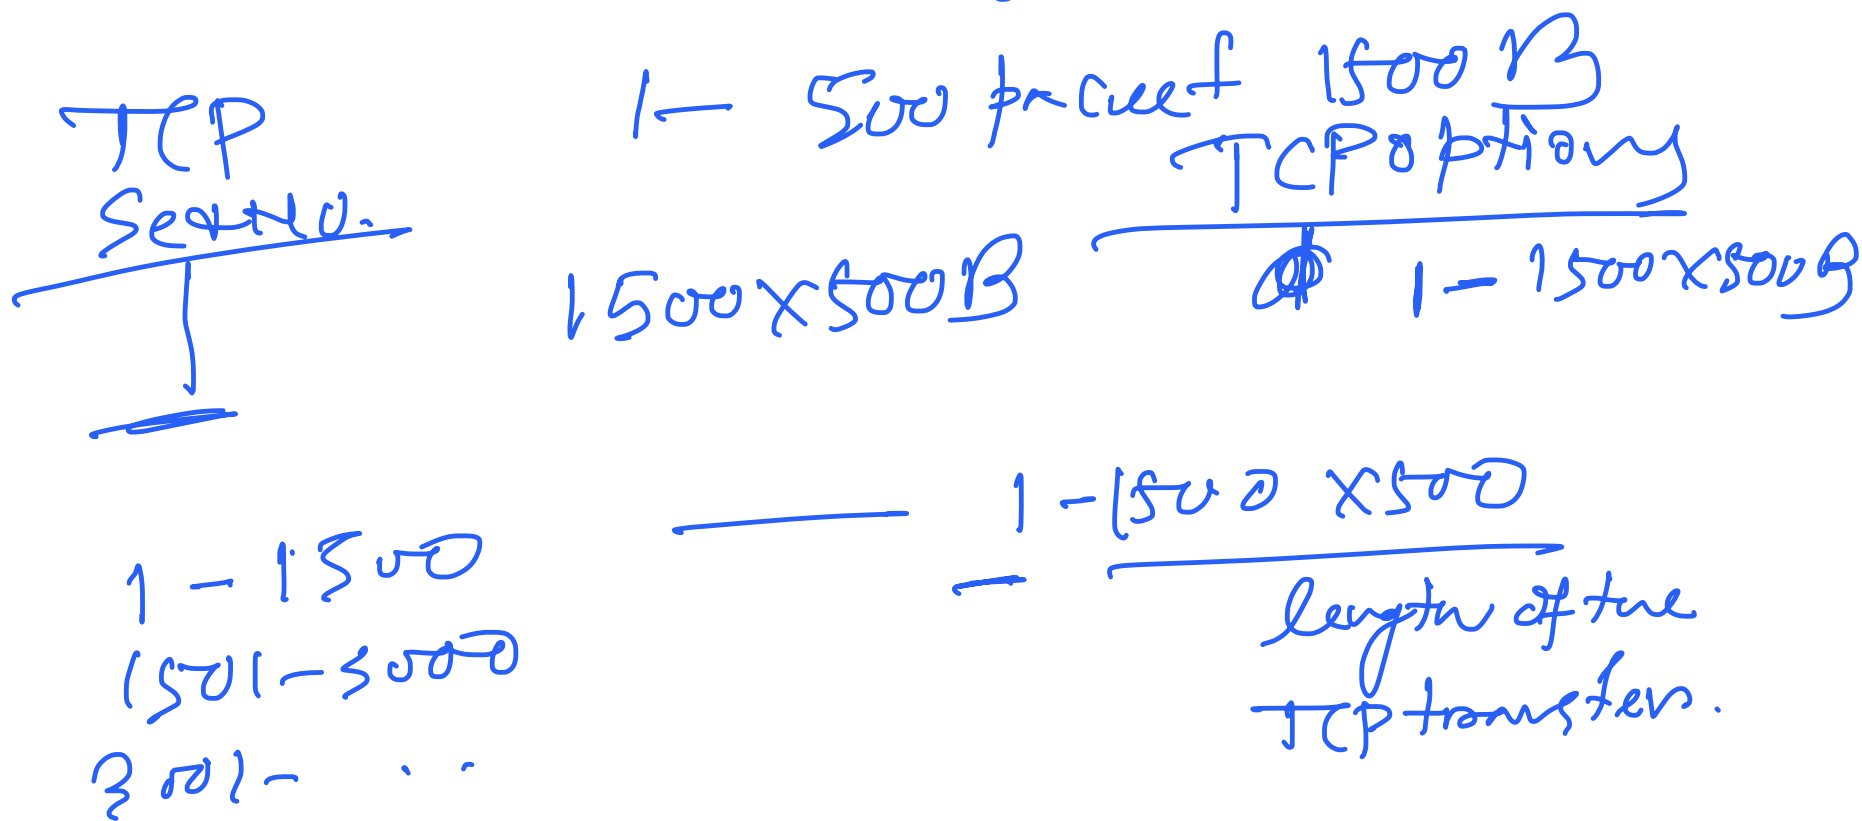

TCP packet

③ TCP: TSO TCP Segment Offloading
TCP options as it is

→ Lets create mapping w/ absolute Seq No.
