

Sink      ○      ○      ○      Source  
             A      B      C

Sink is the Central co-ordinator here, it allocates time slots & Channels to each node.

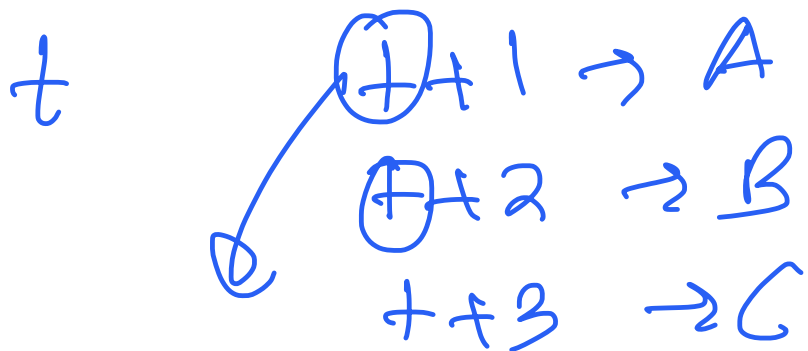

- 3 modes of operation
- ① UIC → unsynchronized Single Channel
  - ② SMC → synchronized multi channel
  - ③ UMC → unsynchronized ?

Initially, all nodes are in VIC  
1 channel  $\rightarrow$  a specific channel.

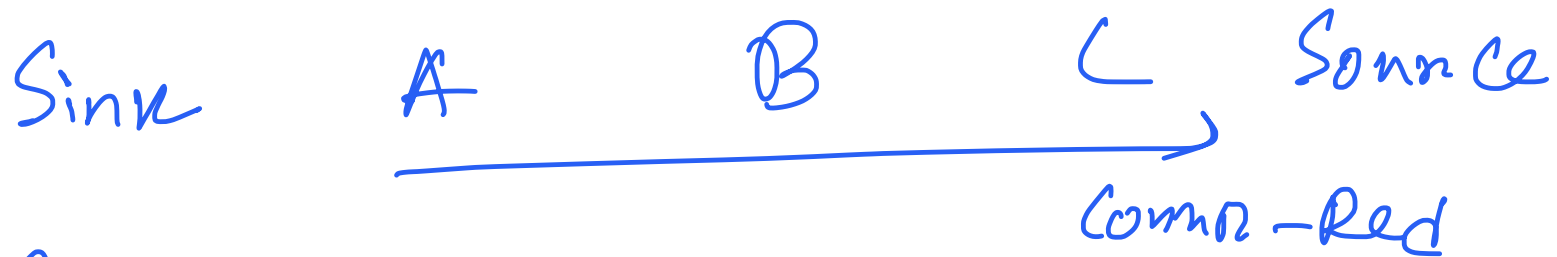

after forwarding the Conn. Ret, each node moves from VIC  $\rightarrow$  UML

Source

after receiving a data packet, a node moves from UML to SML.

S

- 4 → A
- 3 → B
- 2 → C
- 1 → Source

Source after receiving comm. Ref.  
moves from VM → SMC ~~directly~~ Indirectly

10:08 → data [10:08]

↙

C → 10:07      10:08

10:08      10:18

B
