

TCP over wireless

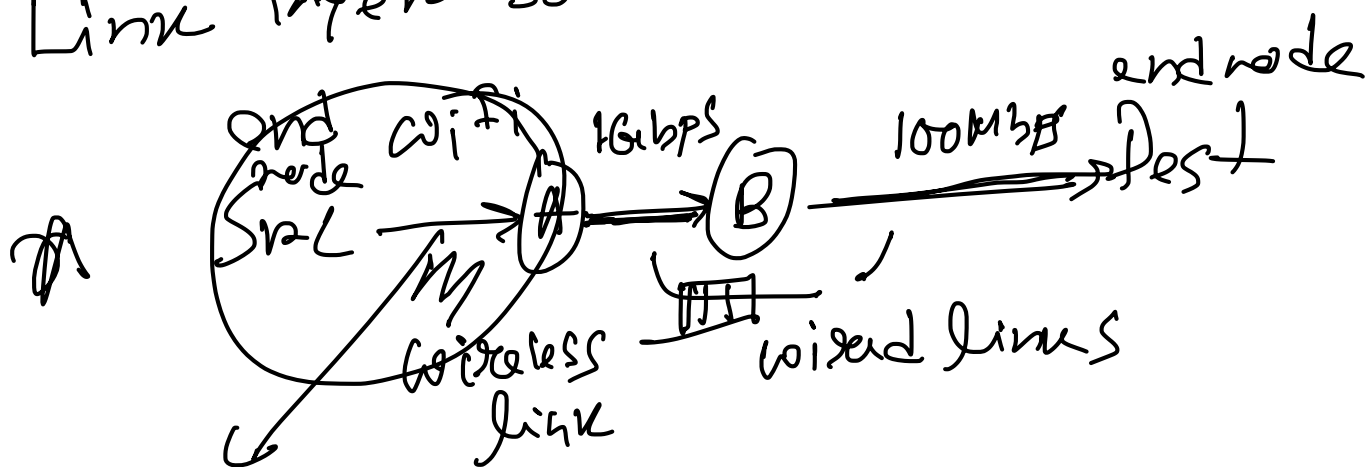

- ① Slow-Start
- ② Congestion Avoidance
- ③ Timeout
- ④ Fast Retx & Recovery

① End-to-End Solutions -

② Link Layer Solutions

wireless link $\rightarrow$ A packet error occurred -

ELN / ECN

Explicit Loss Notification / Explicit Congestion Notification

Whenever losses happen, the sender will either timeout or go into fast recovery but it will lower the congestion window only if it received ELN.

SACK - Selective ACK allows the sender to recover from losses (irrespective of wireless link or congestion related) effectively

(2) Link layer solution

(1) Snoop →

(2) Split-TCP
