

IP ASSIGNMENT - 3
Rubric

Code runs and explainability part is mandatory. If a student is not able to perform these two tasks during the demo, TAs will not evaluate the succeeding components.

For the menu-driven questions, if the code is not menu-driven, further components would not be evaluated.

Q1

Yardstick	Marks	Rationale
Code runs	2	Code is running on the students' system without any error.
Explainability	1	Student is able to explain the working of the code
Importing and Calling	1	Correctly imported and called functions from another file
Deliverables	$(1*4)+(0.5*4)$	• Correct assertion implementation in test_matmul, test_scale, test_translate and test_rotate • Made at least 2 test cases for each function

→ Some students might have redefined the functions into a single file. If their logic is correct, they should be given marks.

→ Code **without the use of assertion** will fetch **no marks** at all.

Q2

Yardstick	Marks	Rationale
Code runs	2	Code is running on the students' system without any error.

Explainability	2	Student is able to explain the working of the code.
Deliverables	4+2	• Class with 4 methods defined in the question correctly implemented(4) • Test case provided, is successfully returning similar results(2)

Even if the output flow is not matching, the resulting computation should be strictly the same.

```
Name of customer: Byomkesh Bakshi
Contact No.: 2357111317
Email: bbakshi@satyanveshi.com
Type of cloth: Woolen
Branded?: 1
Season: Summer
```

The customer specific details:

```
Customer Id: 1
Customer Name: Byomkesh Bakshi
Contact: 2357111317
Email: bbakshi@satyanveshi.com
Type of cloth: Woolen
Branded or not: 1
Total charge: 270.0
To be returned in 4 days!
```

Customer ID could vary depending on whether it

was the first object created or not.

Q3

Yardstick	Marks	Rationale
Code runs	1	Code is running on the students' system without any error.
Explainability	1	Student is able to explain the working of the code.
Deliverables	6+2	• If the code is menu-driven, then only succeeding components would be evaluated. • Class with 5 methods defined in the

		question, correctly implemented(6) • Test case provided, is successfully returning similar results(2)
--	--	--

```

The time stamp would definitely vary for each of the students. Furthermore, a text file should be present:

With the contents:

If text file is not present, 1 mark would be deducted.

Q4

Yardstick	Marks	Rationale
Code runs	2	Code is running on the students' system without any error.
Explainability	2	Student is able to explain the working of the code.
Deliverables	6	• Menu Driven.(2) • Class Person with 2 functions defined inside.(2) • sort_attribute() defined.(2)

Some students might have used dunder functions in place of **object_info()**. That is also correct. The output flow should be similar to the test case given in the assignment. It can vary to some extent.

Q5

Yardstick	Marks	Rationale
Code runs	2	Code is running on the students' system without any error.
Explainability	1	Student is able to explain the working of the code
Classes and Functions	3	• Student and Company class present (1) • Student class has all the 4 functions implemented(1) • Company class has all the 3 functions implemented(1)
Deliverables	4	• Exception Handling for CGPA (1) • Taken inputs of atleast 5 students and 2 companies.(1) • Sample Test Case is giving correct output (2)
